Sugerencias de Instalación

Antes de empezar a instalar esta unidad, lea atentamente todas las instrucciones.

Para un buen ajuste:

Para facilitar la instalación, el producto debe instalarse a temperaturas superiores a 72 °F (22 °C).

Por debajo de esta temperatura, la tela puede encogerse una pulgada o más, lo que dificultaría su ajuste al vehículo.

Es normal que la tela se contraiga o arrugue cuando está guardada en la caja de empaque. A los pocos días después de la instalación, la tela se relajará y las arrugas desaparecerán.

Conseils pour l'installation

Lire toutes les instructions au complet avant de commencer l'installation de cet assemblage.

Pour un ajustement sans problème :

Afin de faciliter l'installation, ce produit doit être installé à des températures au-dessus de 72 °F (22 °C).

Sous cette température, le tissu peut rétrécir d'un pouce (2,5 cm) ou plus, ce qui rendra l'ajustement sur le véhicule difficile.

Il est normal que le tissu rétrécisse et plisse pendant qu'il est dans la boîte d'expédition. En quelques jours après l'installation, le tissu se détendra et les plis disparaîtront.

Step 1

Place the Plastic End Caps #593.71 and #592.66 on the Extruded Aluminum Bow (Available separately with Bestop Parts Kit #52603-01).

The Caps should be aligned so that the "wing" flange is on the underside of the Jeep belt rail, and the tab on each flange is pointing down.

The internal ribs inside the round opening of each end cap will slide into the slots on the top and bottom of the aluminum extrusion.

Step 1

Tools

T40 Torx Wrench
(included in your
Jeep tool kit)

Step 2

Step 1

Slide the open end of one end cap with attached aluminum extrusion over the Jeep belt rail at a location 14.75" from the plastic trim cap at the rear of the door opening.

Step 2

Now pivot the other end of the aluminum bow with attached end cap into place. Slide the opening of the end cap over the Jeep belt rail, and locate it the same distance - 14.75" - from the door opening trim cap on the same side.

If you have Door Surrounds on your vehicle, you must remove some fasteners to allow the Door Surround to be moved out of the way before pivoting the Extrusion Bow into place. You do not need to remove the Door Surround - just move it out of the way. Use the T40 Torx Driver that comes in your Jeep's tool kit to remove the Door Surround fasteners.

Step 3

You may now return the Door Rail that you moved in Section 3 back into place and tighten the fasteners.
