SBC BOLT-ON SELECT PICKUP FOR 7" CT PANS

This flange equipped pickup for the Melling S.B.C M-Select oil pump is a hybrid flange-mount / press-fit design. We utilize the flange for mounting purposes only. The tube seals to the pump inlet like a conventional press-fit pickup, but does not require welding to secure it.

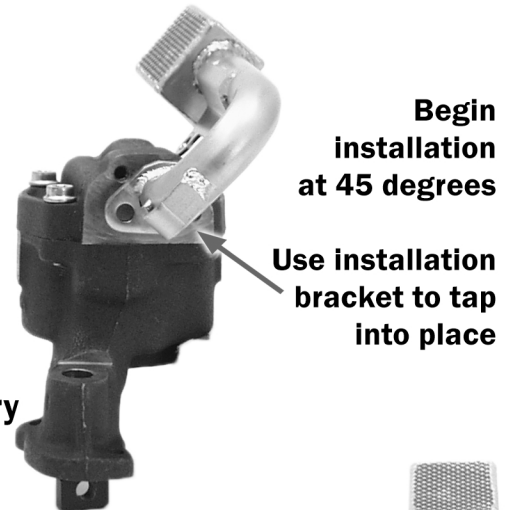

Installation Notes:

To clear the pickup-mounting bracket it may be necessary to begin installing your pickup 45 deg. to its actual mounting position and lightly hammer the pickup into place by tapping on the pickup's installation bracket.

On some Melling oil pumps, it may also be necessary to file the pickup mounting tab closest to the flange to clear the casting.

Once this step is taken, you will then be able to rotate the pickup into the correct position, and bolt it down with the original pump cover bolts.

The close fit of the $\frac{3}{4}$ " tube with the mounting flange will require the use of a ball end 5mm allen key.

Begin installation at 45 degrees

Use installation bracket to tap into place

Rotate pickup into final position
