Product Instructions

#22-576 Sr20 Oil Adapter

This adapter is designed to replace the stock cast filter plate on your Nissan Sr20 engine. To install this adapter begin by removing the stock cast plate and cleaning the mounting surface ensuring proper sealing. Next check that the adapter's O-rings are properly seated and bolt the adapter onto the block using the supplied hardware. Torque the bolts to OE spec. Complete the installation by plumbing your oil lines into the adapter's 1/2" NPT oil feed and return ports. Use thread-sealing tape on the NPT fittings being installed into the adapter.

Note: We included a 1/8" NPT port to allow for installation of an oil temperature or oil pressure sensor. If you do not wish to use this port be sure to install the provided plug using thread sealing tape.
