## Tools Required

Ratchet	Wire cutter
Socket, 10mm	Wire crimp
Socket extension	Wire stripper
Panel trim removal tool	Electrical tape

## ⚠ WARNING

Do not exceed product rating or tow vehicle lamp load rating, whichever is lower.

Be sure not to lay tools across the positive (typically noted with red covers or a red '+' symbol). This can cause a ground to short causing sparks and / or electrical shocks.

The battery connection must be fuse-protected, 10-amp max. Exceeding the product rating can cause loss of warranty, overheating and potential fire.

## NOTICE

Before you begin installation, read all instructions thoroughly.

Proper tools will improve the quality of installation and reduce the time required.

All steps must be followed to ensure the product will function properly. Once installed, test for proper function by using a test light or connecting a properly wired trailer.

## Maintenance

Periodic inspection of all wires and connections should be performed to ensure there is no visible damage or loose connections.

### Step 1

Open the hood and locate the battery under the hood on the passenger side. Disconnect the negative battery terminal. Be sure to fasten this wire down and away from the battery when completing the installation process.

### Step 2

Open the hatch. Locate the taillight trim covers. Use a panel trim tool to loosen the trim cover. Using a 10mm socket, remove the two taillight fasteners. Remove the taillight by pulling out at an angle to the rear and side of the vehicle.

### Step 3

Take note of the connector at the taillight and DO NOT disconnect here. Locate the other connector just below the taillight connector. The connectors will be similar to those on your new custom wiring product. Separate the connectors from the taillight housing taking care not to damage the locking tabs.

## Step 4

Repeated step 2 and 3 on the other side of the vehicle.

## How to Fishwire

**A)** Fish wire is a way to push or pull an electrical wire through a blind hole. Make sure the wire is long enough to stick out on the other side.

Insert the fish wire through the blind hole and locate it on the other side.

**B)** Use tape to secure the harness to the fish wire and pull back up.

The fish wire or harness may get hung up on something, if this happens you may have to push back down, wiggle it around or twist the wire to loosen it from what it's hung up on.

Fish wire could be anything from a cut-up wire hanger, stiff wire, rope or string depending on what is needed for the installation.

### Step 5

Starting below the bumper, remove nine push fasteners securing the rear bumper trim in place. At the opening on the side of the driver-side bumper cover, route the fish wire down the bumper cover and locate under the bumper cover at the rear of the vehicle. Locate the harness with the yellow wire. Pull the harness up to the driver-side factory taillight harness and attach the mating connectors.

### Step 6

Route the green wire along the rear bumper to the passenge side and repeat on the passenger side with the green wire.

### Step 7

Locate a grounding point such as an existing screw or bolt in the frame of the vehicle or drill a 3/32" pilot hole. The area should be free from rust, dirt, and paint (abrasive pad/paper to remove rust and paint). Secure the white ground wire with the ring terminal on the existing fastener or with the provided ground screw.

#### **CAUTION**

Check for miscellaneous items that may be hidden behind or under any surface before drilling to avoid damage and/or personal injury.

### Step 8

Locate a flat clean surface that is out of the path of spray and debris from the rear wheels and road. Adhere the black converter box using the provided double-sided tape. Failure to mount the box in a protected area can cause loss of warranty, product failure, overheating and potential fire.

Route the black power wire from the vehicle battery as shown on the provided 'Powered Converter Lead Instruction Sheet'.

#### **NOTICE**

Once 12 volt power wire is connected to the harness verify that the harness is functioning by attaching the battery and testing with a test light, 4-flat tester, or a functioning trailer.

### Step 9

When in use, route the 4-flat with the center of the vehicle, and out of the hatch to the trailer be sure to stay clear of the hatches latching mechanism. When not in use roll up and store in a convenient, out of the way location. Secure any loose wires with provided cable ties.

Reinstall all items removed during install. If it was disconnected at the beginning of the installation, reconnect the negative battery terminal. Install the provided 4-flat dust cover to help prevent corrosion.
