

Fidanza Flywheel Part Numbers: 193361 & 193461

Fitment must be verified before installation

The ring gear placement is different between the two flywheels. The ring gear placement on a 193461 is closer to the block than the 193361. The ring gear placement **MUST** be verified before installation.

Part Number 193461

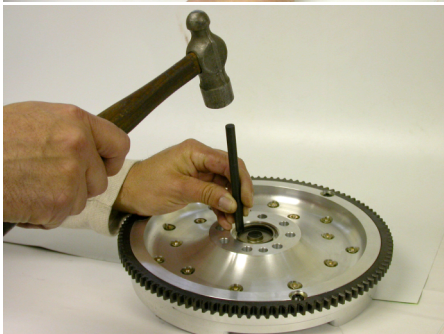

The stock version of this flywheel has a stamped steel plate that needs to be removed and installed in your new Fidanza Flywheel.

If this plate is not installed in the aluminum flywheel, there will be no center hole for clutch alignment tool.

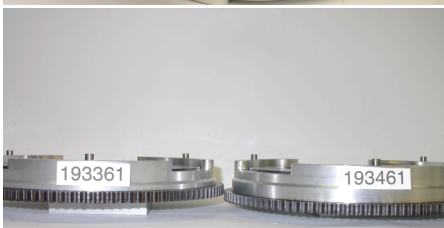

IF THIS PLATE DOES NOT FIT THE ALUMINUM FLYWHEEL, STOP INSTALLATION AND CALL THE FIDANZA TECH LINE OR EMAIL. The center hole measures 38mm from the engine side on 193461. The 193361 measures 28mm and does not require the center plate and will not interchange with 193461.
