

NEW!

Extruded Tube Core Performance Radiators

The Future of Performance Radiators.

Better Cooling. Stronger, More Durable Construction. Less Weight.

Flex-A-Lite® continues more than 50 years of innovation in performance cooling products with the introduction of a new line of Extruded Tube Core Performance Radiators.

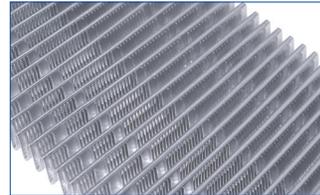

- Increased contact area between the coolant and aluminum tubes for better heat rejection and cooling
- A flat surface on which to braze the cooling fins, maximizing the contact between the tubes and fins for increased heat rejection and better cooling
- Cooling fins with louver patterns cut into them to direct airflow, improving heat rejection and cooling
- Wind-tunnel testing has shown that this Extruded Tube Core technology is significantly more efficient for cooling than standard tube radiators
- Significantly stronger – 100-psi burst strength
- A corner subhead reinforces the cooling tube to header connection, an area prone to cracking and leaking in other brands of aluminum radiators
- Exclusive Flex-A-Lite® transferable 2-year warranty

New Extruded Tube Core in Flex-A-Lite radiators is game changer. This design provides better cooling, stronger construction and lighter weight – there's no comparison!

The cooling fins have been designed with specific louver patterns punched into them to direct airflow, increasing heat rejection and providing better cooling performance.

Flex-A-Lite® Extruded Tube Core Radiators include a corner subhead, reinforcing the cooling tube to header connection; an area prone to cracking and leaking in other brands of radiators.

Part No.	Radiator Application	Flex-A-Lite® Electric Fan	CFM
Ford			
315400	2005–2014 Mustang		
315500	1979–1993 Fox Body Mustang		
315501	1979–1993 Fox Body Mustang LS-Swap		
315560	1979–1993 Fox Body Mustang with Electric Fan System	180	3,300
315561	1979–1993 Fox Body Mustang with Electric Fan System LS-Swap	180	3,300
