Heat Shield Barriers

LAVA™ BATTERY

Lava™ Battery Heat Shield from Heatshield Products protects a vehicle battery from the damaging effects of excessive underhood heat exposure.

The number one enemy of a battery is heat. Excessive heat-exposure or heat-soak can significantly decrease cranking power and shorten a battery's lifespan. With car battery prices surging in recent years, getting the most life from the battery is more valuable than ever.

Lava Battery Heat Shield utilizes Heatshield Products specially formulated Lava thermal-barrier material, which is naturally resistant to chemicals. It withstands up to 1,200 degrees F of constant heat and up to 2,000 degrees F intermittent heat.

At this time, Lava Battery Heat Shield is precut to fit batteries for easy installation.

FEATURES:

- **1200°F** CONTINUOUS **2000°F** INTERMITTENT
- Shields battery from engine bay heat
- Lava rock fiber naturally acid resistant
- Can increase battery life
- Easy to install – custom fit
- Lasts longer than reflective products
- Made in the USA
