Notes:

1) Grind the nubs that hang down from the lower ball-joint as it can scratch the powdercoat on the lower arms at full droop (extension).

2) Check upper arm clearance on the backside of the coil bucket. You may need to grind the edge back an 1/8".

3) We recommend running a 33"-34" tire on either a 16" or 17" rim with a maximum backspacing of 4.75"

4) We recommend using a 16" x 600# coil, on the correct Fox or King 8" travel shocks. Shocks must have a 90 degree fitting on the top cap, a raised lower spring seat and 1.25" shock spacers.

5) We recommend using 2.0 x 2"-2.5" bumpstops.

6) Fiberglass front fenders are required.
