

New Plastic Design Timing Chain Guide

Ford has updated the right hand fixed timing chain guide for 3.5L-3.7L engines. Model years affected are 2007-2010. The early design consisted of steel and contacted the chain on the outside. The new plastic design will contact the chain on the inside.

Note: When updating an engine that originally used the early steel timing chain guide longer mounting bolts may be required. If so, use (1) hex head bolt M6-1.0X30mm and (1) hex head bolt M6-1.0X50mm along with separate flat washers. These bolts and washers are not included in the set.
