

Thank you and congratulations on your purchase of a Pacbrake Air Horn kit.

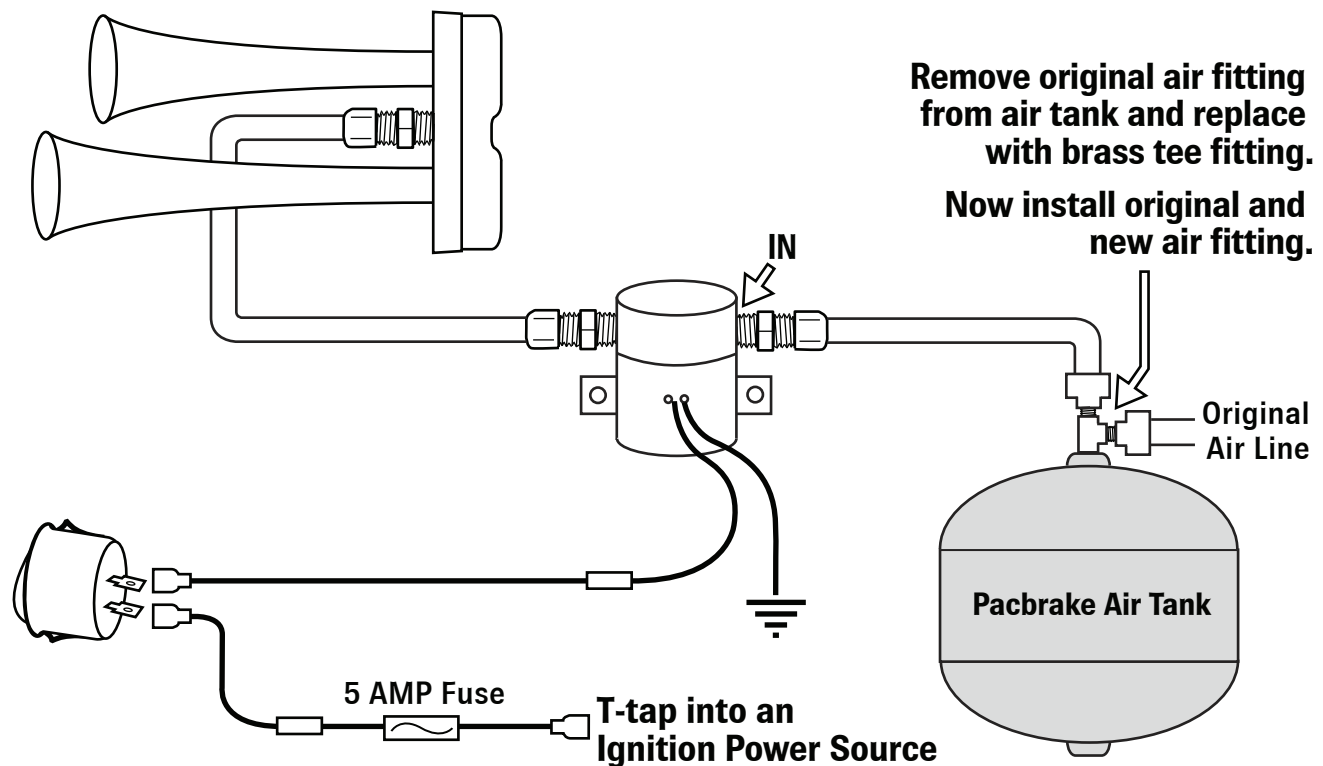

Please Note

Some municipalities do not allow the use of air horns on passenger vehicles, check the regulations in your area before installing this kit.

This air horn kit requires an on board air source and a tank to effectively activate the system. We recommend a minimum 1/2 gallon air tank with a minimum of 100 PSI and a maximum of 150 PSI. Pacbrake can provide air tanks, pressure switches, and air compressors to suit your needs; call our customer service desk @ 800.663.0096.

The air horn can be mounted in any position as long as water will not accumulate in the chambers.

Installation

Warranty

Guaranteed for 60 days from the date of purchase
