

# **AIR SUSPENSION KIT**

Chevrolet Silverado/GMC Sierra 2500HD/3500HD (2WD/4WD)\*

\*With or without 5th Wheel Hitch.

Eliminate your vehicle's sag, sway and bottoming out while providing added support for an overall smooth and safe ride with this extreme duty air suspension kit. Rated for up to 7500 lbs of load-leveling capacity +, this kit is ideally suited for those towing/hauling big loads on a regular basis.

<sup>\*</sup> See application guide for proper fitment.

Thank you and congratulations on the purchase of an Air Suspension kit. Please read the entire manual prior to starting the installation to ensure you can complete it once started.

#### **IMPORTANT**

This air suspension kit will not increase the GVWR (*Gross Vehicle Weight Rating*), as the GVWR is determined by the vehicle manufacturer. **Do not exceed the maximum capacity listed by the vehicle manufacturer.** 

For safe and proper operation of the vehicle, never exceed a maximum of 100PSI in the air springs. Staying under the pressure limit will ensure maximum air spring life. Failure in doing so may result in damage to your vehicle and/or a void warranty.

#### **SAFETY WARNINGS!**

Please read and abide the instructions found in this manual, paying close attention to the helpful, cautionary or dangerous warning icons highlighting important safety recommendations and maintenance suggestions throughout this manual.

#### **HELPFUL INSTALL TIP**

Additional information that could potentially make the job a little easier.

#### PLEASE USE CAUTION

Unsafe practices could result in damage to you or your vehicle, or others.

#### DANGER WARNING

Hazards which could result in severe personal injury or death.

- Serious personal injury or death may result from an air spring failure or accident due to improper installation or air spring pressure operation or maintenance.
- Inflating an unsecured air spring is dangerous. If it bursts, it could be hurled into the air with explosive force resulting in serious personal injury or death. Never inflate an air spring unless it is secured to the vehicle.
- Removing and replacing air springs can be dangerous. This is only a job for a qualified service professional. Never perform air spring service procedures without proper training, tools, and equipment.

#### **BEFORE STARTING THE INSTALLATION**

- Ensure the application information is correct for the make, model and year of the vehicle you are installing the kit on.
- Some vehicles are equipped with a rear wheel brake proportioning valve. Check with the manufacturer before installing the
  air spring kit, as it may affect braking performance.
- It is recommended to use a good quality anti-seize on all fasteners. This will reduce the chance of corrosion on the fasteners
  and will help facilitate removal, if required at a later date.
  - PLEASE NOTE: This kit contains push-to-connect fittings; using scissors or wire cutters to cut the nylon air line will distort the line and cause the connection to leak. The air line <u>must</u> be cut off squarely with the hose cutter provided in this kit, or a sharp utility knife. Failure to do so may void the warranty.

**WARNING:** This product can expose you to the chemical Hexavalent Chromate, which is known to the State of California to cause cancer and birth defects or other reproductive harm. *For more information go to www.P65Warnings.ca.gov* 

# **KIT CONTENTS**

Please confirm the items below are provided in your kit before starting the installation.

# **REQUIRED TOOLS**

- Hoist or Floor Jack
- Safety Stands
- Safety Glasses
- Torque Wrench
- Standard Combination Wrenches
- 7/32" Hex Allen Wrench
- Ratchet
- Metric & Standard Sockets
- Hose Cutter (included) or Sharp Utility Knife
- Pipe Thread Sealant
- Spray Bottle with Dish Soap/Water
- Air Compressor/Compressed Air Source (to test/fill air springs)
- 9/16" Deep Well Sockets
- Heavy Duty Drill
- 3/8 and 5/16 Drill Bits (very sharp)
- Hammer
- Center Punch

# KIT EXPLOSION DIAGRAM

#### DRIVER SIDE ASSEMBLY SHOWN (Passenger side assembly is mirrored)

•••••

# INSTALLATION INSTRUCTIONS

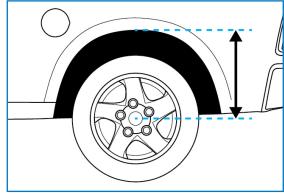

#### **MEASURE STOCK RIDE HEIGHT & CLEARANCE**

Park the vehicle on a level surface and remove any unnecessary weight from the vehicle to attain a "Normal Ride Height".

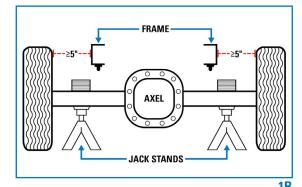

Using a measuring tape, measure the distance between the center of the wheel hub and the bottom of the fender well (see Figure 1 for reference) this will give you your stock Normal Ride Height.

Note the ride height for all four tires.

Check the clearance between the outside of the frame and the inside of the rear tires (as shown in red in Figure 1B), a minimum of 5" is required for adequate air spring clearance.

1A

#### 2 REMOVE REAR WHEELS

• PLEASE NOTE: This step is optional for this installation but will make the install easier to complete.

Place wheel chocks in front of and behind both front wheels.

Raise the rear of the truck high enough to remove both wheels and attain a comfortable working height.

Place two jack stands under rear axle (as shown in Figure 1B).

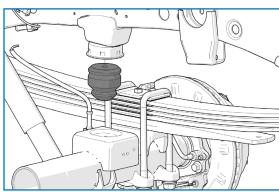

Lower the vehicle until the axle is supported by the jack stands.

Remove rear wheels.

#### 3 REMOVE JOUNCE BUMPERS

Remove the jounce bumpers by prying them out of the retaining cup.

A pry bar or large flat screwdriver is typically required.

#### 4 PRE-ASSEMBLE AIR SPRINGS

Install the 3/8" NPT threaded fittings in the fill opening of each air spring. Tighten finger tight plus an additional 1.5 turns.

• The use of thread sealant or Teflon tape is recommended.

Place a roll plate and the upper bracket on the top surface of the air spring (see Figure 4A for assembly reference). Align the holes in the air spring, roll plate and bracket and secure with two  $3/8"-24 \times 7/8"$  countersunk screws.

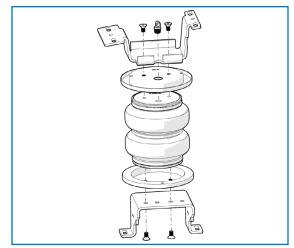

Torque screws to 27 Nem (20 ft-lbs)

Place a roll plate and lower bracket (see note below) on the bottom surface of the air spring.

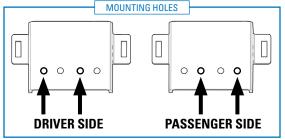

PLEASE NOTE: The Drive side and Passenger side assemblies
 use different mounting holes in the lower bracket (as shown
 in Figures 4B & 4C). Please make sure to select the appropriate
 mounting holes when assembling to ensure a correct installation:

Align the correct side lower bracket holes for each vehicle side assembly. Secure with two  $3/8'' - 24 \times 7/8''$  countersunk screws and torque to 27 N•m (20 ft-lbs).

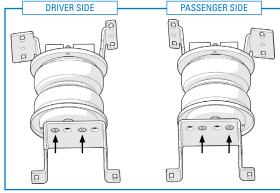

The finished assemblies should appear as shown in Figure 4C.

4A

4B

4C

# **5 REMOVE DRIVER SIDE E-BRAKE BRACKET**

Remove the M8 hex cap screw retaining the emergency brake cable bracket to the frame on the driver side. (Shown with a white arrow in Figure 5)

Discard the bracket and screw as they will not be reused in this installation.

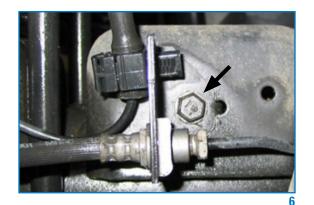

5

# **6 UNSCREW BRAKE LINE BRACKETS**

Remove the M8 hex cap screws retaining the brake line to the jounce bumper stops. (Shown with a black arrow in Figure 6).

Discard the screws as they will not be reused in this installation.

#### 7 UNSCREW PASSENGER SIDE E-BRAKE BRACKET

Remove the hex cap screw retaining the emergency brake cable to the jounce bumper stop on the passenger side of the vehicle. (Shown with a white arrow in Figure 7).

Discard the screw as it will not be reused in this installation.

#### 7

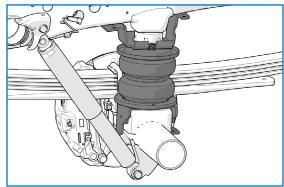

# **8 INSTALL AIR SPRING ASSEMBLIES**

PLEASE NOTE: It may be necessary to raise the frame of the truck a few inches to allow more clearance to install the spring assemblies

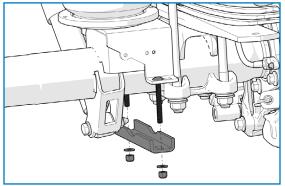

Position the air spring assembly such that the lower bracket rests on the jounce bumper stop and the upper bracket nests around the jounce bumper retaining cup with the air fitting pointing inwards (see Figure 8A for reference).

Insert two  $3/8"-16 \times 3.5"$  carriage bolts through the rectangular holes in the lower bracket. Install the axle strap (as shown in Figure 8B) with two 3/8" flat washers and two 3/8" nylon lock nuts.

Do not fully tighten yet.

**8A** 

8**B** 

# 9 INSTALLATION FOR TRUCKS WITHOUT A 5<sup>TH</sup> WHEEL HITCH

Secure the upper bracket to the frame (as shown in Figure 9A on the following page) using two U-bolts with four 3/8" flat washers and four 3/8" nylon lock nuts.

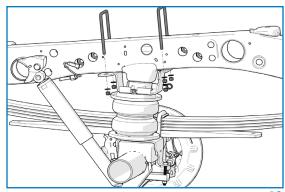

Ensure no wires or brake lines are pinched between the frame and U-bolt during install.

Align the air spring by adjusting the brackets on the frame and axle to achieve the best vertical alignment (reference Figure 9B for correct air spring alignment).

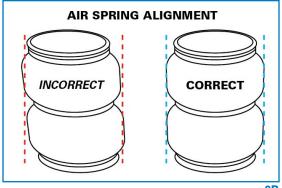

Evenly torque the nylon lock nuts on the upper bracket and axle strap to 27 N•m (20 ft-lbs).

**On the Driver's Side,** secure the emergency brake cable [previously removed in Step 5] to the upper bracket with an adel clamp.

Attach the adel clamp to the forward U-bolt with a second nylon lock nut and torque to 27 N•m (20 ft-lbs).

9A

**9B** 

# 10 INSTALLATION FOR TRUCKS WITH A 5<sup>TH</sup> WHEEL HITCH

Secure the upper bracket to the frame (using figure Figure 10 as reference).

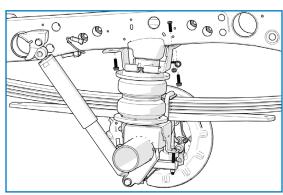

First, align the air spring by adjusting the brackets on the frame and axle to achieve the best vertical alignment (see Figure 9B for correct air spring alignment).

Using the center holes in the upper bracket flanges as a reference, drill two 5/16" holes into the bottom of the frame.

Secure the upper bracket to the frame using two  $3/8'' - 16 \times 1.25''$  self threading bolts and torque to 27 N•m (20 ft-lbs).

On the Driver's Side, secure the emergency brake cable removed in Step 5 to the upper bracket with an adel clamp. Attach the adel clamp to the forward upper bracket slot with a  $3/8"-16 \times 1.25"$  bolt and 3/8" nylon lock nut.

Torque bolt to 27 Nem (20 ft-lbs)

10

# 11 REATTACH BRAKE LINES

Using the M8 x 1.25 x 10mm Hex bolts, attach the brake line brackets removed in Step 6 to the rear face of the lower brackets as shown in Figures 11A & 11B.

Torque bolts to 16 N•m (12 ft-lbs)

On the Passenger Side, attach the emergency brake cable bracket to the front face of the lower bracket with a M8 x  $1.25 \times 10$  mm Hex bolt. (See Figure 11C)

Torque bolt to 16 Nom (12 ft-lbs)

Bend tabs on the heat shield so the required  $\frac{1}{2}$ " of dead space exists between the heat shield and exhaust when attached.

Attach the heat shield to the exhaust pipe on passenger side using two ring clamps (shown in Figure 12).

Each hose clamp holds a tab against exhaust pipe.

11A

11B

11C

#### **INSTALL AIR LINE**

Two fill valves are provided in this kit. The most common place to install them is in place of the license plate fasteners. Alternatively, two 5/16" holes can be drilled in a location of your choosing.

Cut the air line assembly into two equal lengths with the hose cutter provided in this kit or a sharp utility knife.

(!) PLEASE NOTE: This kit contains push-to-connect fittings; using scissors or wire cutters to cut the nylon air line will distort the line and cause the connection to leak. The air line must be cut off squarely with a hose cutter or a sharp utility knife.

Install one air line at a time starting at the fill valve location. Place a 5/16" nut on the air valve. Leave enough of the inflation valve in front of the nut to extend through the hole, install a flat washer, and 5/16" nut and cap (reference Figure A for assembly). There should be enough valve exposed after installation – approximately  $\frac{1}{2}$ " – to easily apply a pressure gauge or an air chuck.

Route the air line back to the NPT fitting on the air spring, then cut the hose to length. Moisten the end of the air line prior to inserting it into the fitting and push it in until it stops.

# Repeat with the other fill valve.

Secure the air lines using the provided tie-straps, away from any moving items and heat sources.

#### **CHECK SYSTEM FOR LEAKS**

Inflate both air springs to 90 psi (60 psi for in-coil bags), then use a mixture of dish soap and water on all air line connections to detect any air leaks. Large, expanding bubbles indicate a leak (as shown in Figure B).

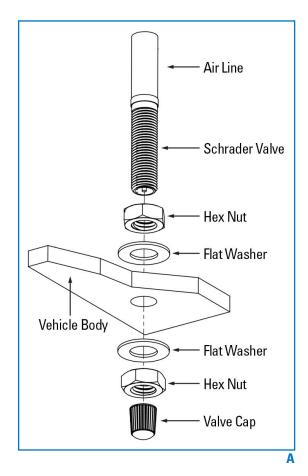

# Repair as necessary and retest.

Inflate air springs to a predetermined value and on following day recheck pressure. If one or both of air springs have lost pressure, an air leak is present.

Leak must be repaired, and then retested until no leaks exist.

**CONGRATULATIONS! You have completed the install** 

After Installation continues on the following page.

\*Air Spring & NPT Air Fitting may differ between kits

Thank you again, and congratulations on the installation of your Air Suspension kit.

#### AFTER COMPLETING THE INSTALLATION

- The air spring must have clearance between itself and the surrounding components to prevent any contact when spring is
  inflated or compressed. Trimming off excess bolt length may also be required to ensure no contact with the spring or other
  suspension components can be made once installed.
- If removed, re-install the wheels and torque fasteners to the manufacturer's specifications. Re-torque all fasteners after the
  first 500 miles of driving.

#### ODERATING VOUR VEHICLE MUTH ALR GHOREMOIGN

#### **OPERATING YOUR VEHICLE WITH AIR SUSPENSION**

Air springs have minimum and maximum recommended pressure requirements:

PART#	SPRING STYLE	SPRING TYPE	MIN PSI	MAX PSI
HP10189	In-Coil	STANDARD DUTY	5 PSI	70 PSI
HP10560	III-GOII	STANDARD DUTY	3 PSI	
HP10001		STANDARD DUTY		100 PSI
HP10173	Sleeve Style	STANDARD DUTY	10 PSI	
HP10199		STANDARD DUTY		
HP10083	Cinale Convoluted	HEAVY DUTY	5 PSI	100 PSI
HP10083J	Single Convoluted	HEAVY DUTY with JOUNCE BUMPER	0 PSI* / 5 PSI	100 PSI
HP10000	Double Convoluted	HEAVY DUTY	5 PSI	100 PSI
HP10000J	Double Convoluted	<b>HEAVY DUTY</b> with JOUNCE BUMPER	0 PSI* / 5 PSI	100 PSI
HP10068	Large Double Convoluted	HEAVY DUTY	5 PSI	100 PSI
HP10438	Double Convoluted	EXTREME DUTY	5 PSI	100 PSI
HP10438J	Double Collybluted	EXTREME DUTY with JOUNCE BUMPER	0 PSI* / 5 PSI	100 PSI

<sup>\*</sup> Springs with a jounce bumper can be run at zero PSI when vehicle is unloaded only

For safe and proper operation, never operate the vehicle over the maximum listed PSI in the air springs. Staying under the pressure limit will ensure maximum air spring life. Failure in doing so may result in damage to your vehicle and/or a void warranty.

Air springs are designed to maintain the vehicle's stock ride height with a load. Do not use the air springs as a means to lift vehicle with no load. This will result in a harsh ride.

#### SERVICING YOUR VEHICLE WITH AIR SUSPENSION

When lifting the vehicle with a floor jack or hoist on the frame, never allow the air spring to limit the travel of the axle. Try to always jack the vehicle on the axle. Suspending the axle with the air spring limiting the axle travel will damage the air spring and void the air spring warranty.

# **WARRANTY**

See additional warranty included with this kit for details.
